PROJECTS

Dojo Activity Planner

A full stack application built according to specification requirements. Logged in users can create their own activities and join other users' activities. Developed and deployed within a 4-hour time frame for an exam.

Technologies Utilized:

- C#, ASP.NET Core, Entity Framework Core

Foopie

A recipe site that implements the Spoonacular API. Upon logging in, users have the ability to search for recipes using keywords or specifying cuisines to find the perfect recipe. Users can also create their own recipes and save them to their favorites. There is also a "Surprise Me" feature which gives a randomized recipe for users who are looking for something new. Developed in 5 days with in a team of 3.

Technologies Utilized:

- Python, Django, SQLite, Spoonacular API
